Practical course

Systems Programming

(WiSe 2026)

Preliminary meeting

Systems Research Group
https://dse.in.tum.de/

About us

Systems Research Group

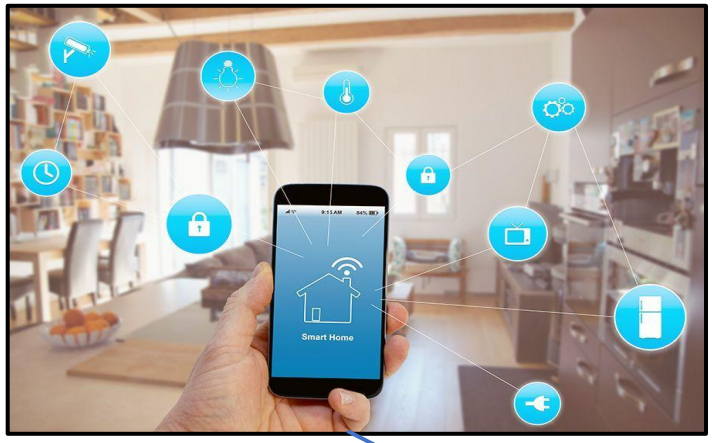

Prof. Pramod Bhatotia

Anubhav Panda		anubhav.panda@tum.de
Anatole Lefort		anatole.lefort@tum.de

Systems programming applications

Internet of things

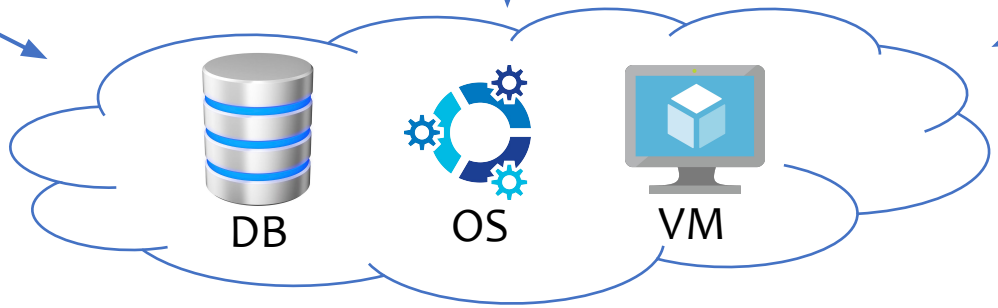

Transportation

Healthcare

Low level systems programming is an **essential building block** for high level applications

Software core properties

Performance

Reliability

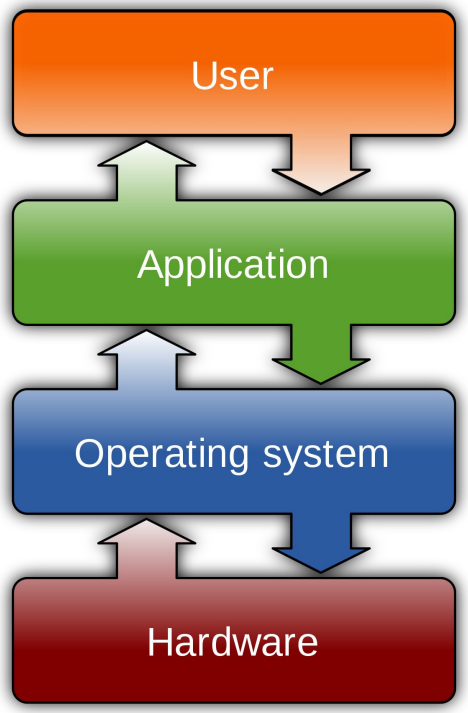

Security

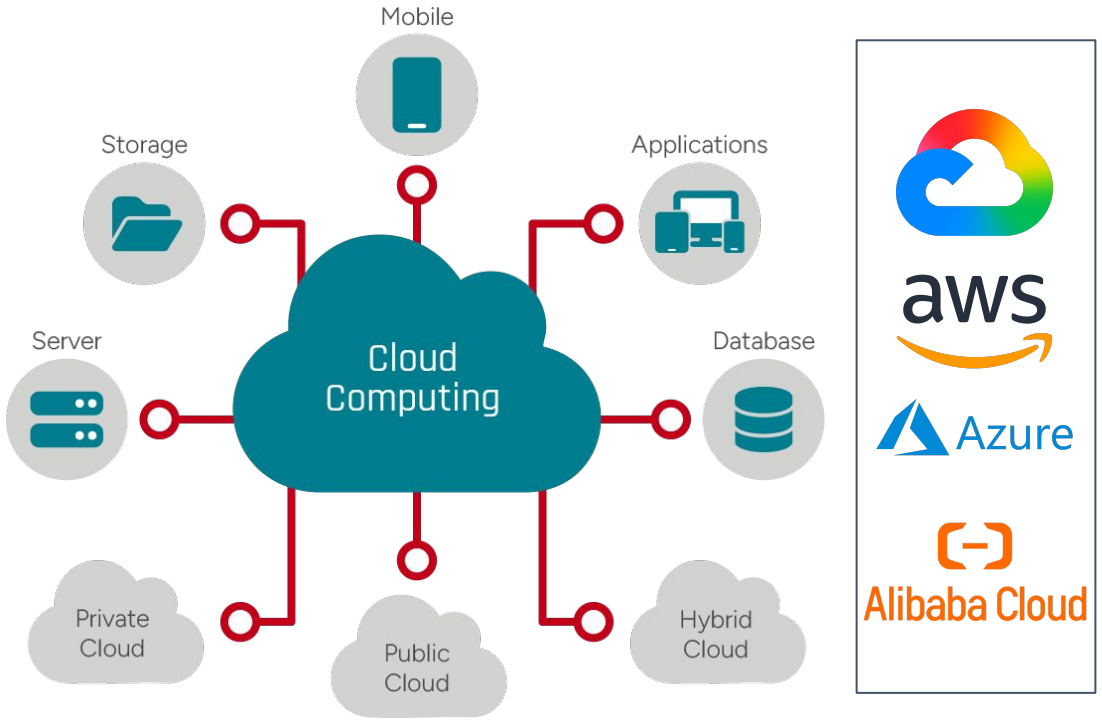

Efficient low level systems programming is **critical** to ensure these properties

System stack

Systems programming spans **multiple system levels** and **application domains**

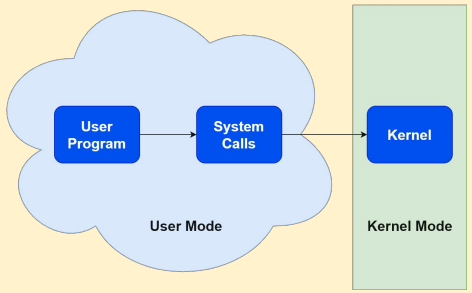

Time to get hands-on experience!

Course topics

This course covers some of the most important aspects of systems programming:

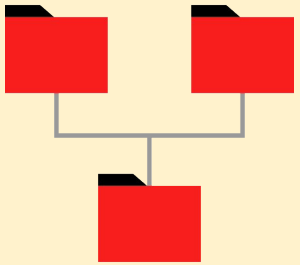

1

Kernel and system calls

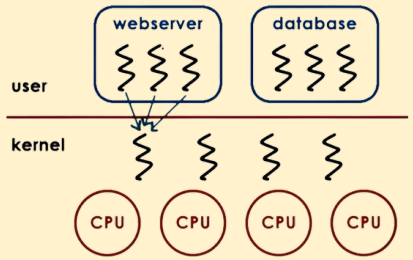

2

File I/O

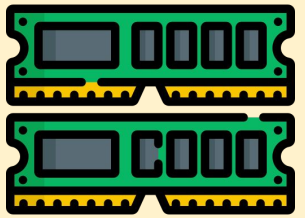

3

Concurrency

4

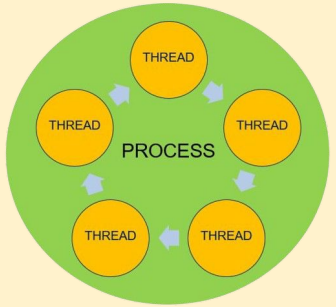

Memory

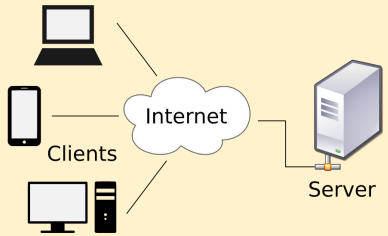

Course topics

This course covers some of the most important aspects of systems programming:

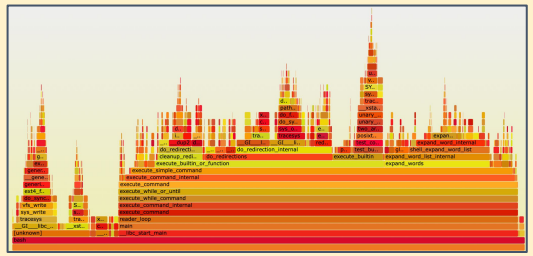

5 **Processes**

6 **Networking**

7 **Performance profile**

8 **Compilers**

Lab format

- Lab assignments
  - **7 practical programming exercises**
  - 2 week deadlines
  - Online submission
- Weekly meeting
  - Video with theoretical background coverage
  - Question and answer session to explain and discuss each assignment
  - Zulip channel for questions
- Assessment
  - **7 programming assignments (100%)** with public & private unit tests
  - No further exam / quiz / projects 🎊

Grading system

- **Course Git platform (GitLab or equivalent)**
  - Template repository for each task with detailed instructions & test cases
- Automated tests
  - **30 points per task!**
  - Specially designed test cases with gradually increasing difficulty
  - Hidden tests to detect & prevent gaming the grading system

From	To	Grade	From	To	Grade
0	84	5.0	163	172	2.7
85	94	4.7	173	182	2.3
95	104	4.3	183	192	2.0
105	124	4.0	193	200	1.7
125	137	3.7	201	206	1.3
138	149	3.3	207	210	1.0
150	162	3.0			

Languages/OS

- Languages
  - Choice between **C, C++ and Rust**
  - Limited choice of allowed libraries (different per language)
  - Can be switched for each task
  - Some tasks require a specific language

- OS
  - All executables must run on **Linux, x86_64**
  - Use virtual machines if you run a different OS (i.e. Hyper-V on Windows)
  - You can also use the remote desktop (lxhalle.in.tum.de)

Learning goals

- Acquire fundamental knowledge to build robust systems
- Familiarize yourself with end-to-end system design
- Learn techniques for profiling, debugging and optimization of low-level code
- Get a good understanding of memory and resource management
- Improve hands-on experience through a variety of programming tasks

Most importantly, have fun!

Prerequisites

- We don't have any compulsory pre-requisites, but we prefer
  - **Knowledge equivalent to the lectures**
    - Fundamentals of Programming (IN0002)
    - Introduction to Computer Architecture (IN0004)
    - Basic Principles: Operating Systems and System Software (IN0009)
  - **Programming knowledge**
    - Foundations of programming (C, C++ or Rust)
    - Work in a Linux environment
  - **Knowledge on Git and GitHub**

If the prerequisites are unclear/strict -- please check with the instructor!

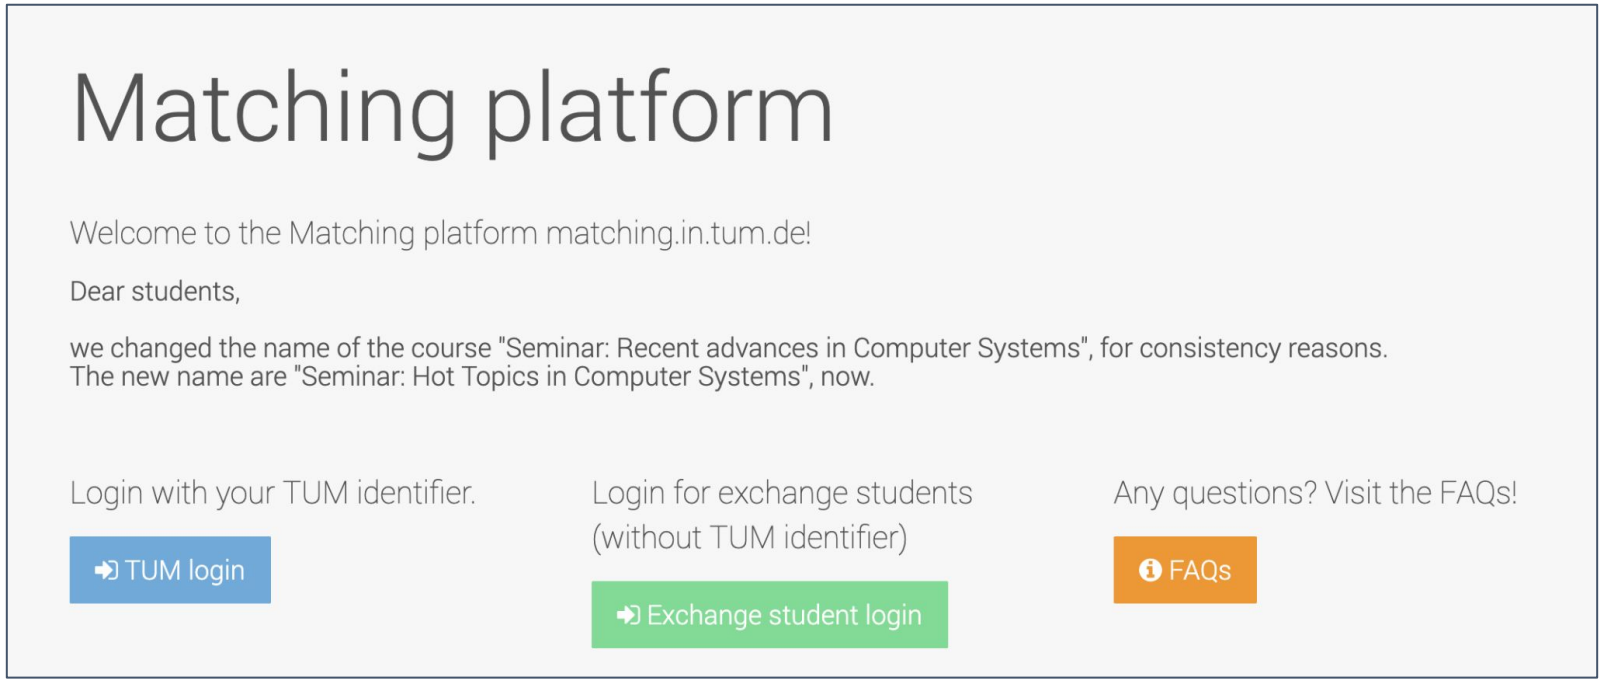

Code of conduct

- University plagiarism policy
  - https://www.in.tum.de/en/current-students/administrative-matters/student-code-of-conduct/

- Decorum
  - Promote freedom of thoughts and open exchange of ideas
  - Cultivate dignity, understanding and mutual respect, and embrace diversity
  - Racism and bullying will not be tolerated

- **Please write your own code!**
